

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION III
1650 Arch Street
Philadelphia, Pennsylvania 19103-2029

MAR 08 2012

Ex. 6 - Personal Privacy

Thank you for your letters to Administrator Lisa P. Jackson regarding the moratorium on gas drilling and our water quality investigation in Dimock, Pennsylvania. I welcome the opportunity to clarify the goals of our investigation and to explain how it aligns with the Obama Administration's strong support of safe and responsible domestic natural gas development.

In response to your February 21, 2012 petition to resume Cabot Oil and Gas Corporation's (Cabot) drilling operations in Dimock, the Environmental Protection Agency (EPA) has not invoked a moratorium on gas drilling, and has no authority to institute such a moratorium. The Pennsylvania Department of Environmental Protection (PADEP) has regulatory authority over gas drilling in Pennsylvania. For further information on this matter, please contact Mr. Scott Perry, Deputy Secretary for Oil and Gas Management at PADEP. Mr. Perry can be reached at 717-783-9438.

The involvement of EPA in Dimock is in response to requests from community members who are concerned about potential risks to their health as a result of Cabot's decision to stop providing alternate water supplies. EPA did not take this step lightly, but felt compelled to intervene when we became aware of monitoring data, developed largely by Cabot, indicating the presence of several hazardous substances in drinking water samples, including some at levels of health concern. Because the data available was incomplete and of uncertain quality, we determined that additional monitoring was prudent to investigate potential health concerns and develop a sound scientific basis for assessing the need for further action to protect public health. We took the limited step of providing alternate water to four homes where hazardous substances were present at levels above health-based thresholds to provide interim protection to residents while monitoring is underway. We asked Cabot if they were willing to deliver water to these four homes and took action only after Cabot declined.

Our actions to date have been guided only by science. Data initially provided to EPA, which included information from both PADEP and Cabot, was reviewed by EPA in November 2011 and appeared to indicate that private well water posed no health concerns. However, on December 6, 2011, EPA received additional data from some residents, including the results of monitoring by Cabot that warranted a further evaluation of the situation. Review of this data, together with changes in some EPA screening levels for assessing risk, led us to the conclusion that there were health concerns that required action. In addition, although arsenic,

manganese, and sodium are naturally occurring in the environment as you mention, EPA carefully reviewed the levels of these chemicals detected in home wells and found them inconsistent with background concentrations typically found in the aquifer zones from which Dimock home owners draw their well water.

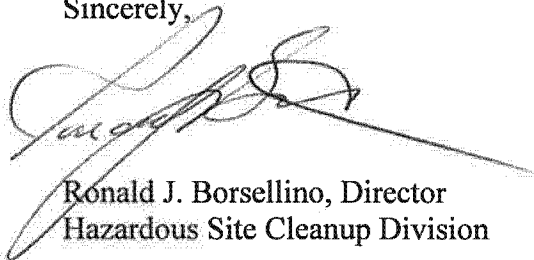

Our actions reflect our longstanding responsibility under federal environmental laws to address threats to public health. Since the signing of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) statute in 1980, EPA has responded to hundreds of sites across the country to provide alternate water and conduct sampling when the presence of hazardous substances posed a potential risk to potable water.

State and federal agencies have critical, complementary roles in ensuring that shale gas extraction occurs safely. States have important front-line responsibilities in permitting natural gas extraction, and we respect and support their efforts. But EPA, likewise, has important oversight responsibilities and acts as a critical backstop when public health or the environment may be at risk. We intend to exercise this authority prudently and sparingly. Again, we would consider action in any situation where we are presented with information showing potential health risks to citizens within the scope of the laws we administer, regardless of the context or background of the site.

EPA is taking every precaution to ensure that our samples are collected and reviewed using the highest scientific standards. The residents in Dimock deserve answers based on the facts, and we look forward to working together with residents, PADEP and Cabot to meet our responsibility to your community. Please feel free to share this information with fellow concerned citizens.

If you have any questions, please do not hesitate to contact Ms. Trish Taylor, EPA's Community Involvement Coordinator, at 215-814-5539.

Sincerely,

Ronald J. Borsellino, Director
Hazardous Site Cleanup Division

CC: Scott Perry, PADEP
